DETAILED ACTION

Page 2

1. This case has been reassigned to a new Examiner.

Election/Restrictions

- 2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-2, 13-14, and 25-26, drawn to distributed service information retrieval, classified in class 709, subclass 223.
 - II. Claims 3-12, 15-24, and 27-36, drawn to matching a service to characteristics in a network service parameter request, classified in class 709, subclass 226.

The inventions are distinct, each from the other because of the following reasons:

- 3. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system is used to match services with parameters and characteristics of a service request from a local service manager. The subcombination has separate utility such as retrieval of data over a network.
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
